

Ted Nugent To Address PMPA's National Technical Conference

By Monte Guitar, Programming and Research Coordinator mguitar@pmpa.org

Ted Nugent, internationally acclaimed recording artist, political conservative and ultimate conservationist, will be the key-note speaker at PMPA's upcoming National Technical Conference in Dearborn, Michigan, from April 29 to May 2, 2006. "Best Practices Driving Change" is the theme for this event. America's number one outdoors role model and wild-man of rock-n-roll will give his version of unyielding, full steam ahead, best-practice focus.

Mr. Nugent will describe what motivates him to stay on task and to continue his personal full-throttle development. We all know the challenges that we face to remain focused and motivated. Whether it's slinging a guitar on stage or in the studio, a bow and arrow in the wild or manufacturing a precision part, we can all identify with the challenge of staying at the top of our game.

Our industry has survived the roller coaster of the good, the bad and the downright ugliest business conditions. However,

it is our competitive nature that drives us to continuous improvement regardless of the state of the economy. It is our drive for excellence that makes North American manufacturing second to none. Ted Nugent's continued success is the result of a great work ethic and drive to excel.

PMPA's 2006 Technical Program Committee, chaired by Eric Somma of Somma Tool Company, has developed a program that will speak to the entire technical spectrum—from top management interest, to quality professional attention, to technical innovation and development on the shop floor. Mr. Nugent's address to the association will provide the energizing kickoff to this conference where the leading shops in the industry will share their enthusiasm and successes implementing best practices within their areas of expertise.

To register for the conference, please visit www.pmpa.org and click on the "National Technical Conference" link on the PMPA home page.
